

JURASSIC Detectives

Curious Crinoid

Question 1: Crinoids resemble the structure of a plant with a main 'stem' and 'branches', but what do you think they actually were?

- A - A coral B - A type of seaweed
C - A fish D - An animal

Question 3:

Here at Charmouth there is one particular seam of rock or 'bed' that is full of Crinoid fossils.

Why might there be more of a particular fossil in just one place?

Question 2:

Fossil Crinoid is often found still attached to the fossil wood from which it would have hung upside down.

Why do you think it attached itself to something that floated?

Answers to all of Tom & Mina's puzzles are on the CHCC website.
